

What is Ascension?

Ascension is a cloud based premier workers' compensation claims management software for insurance agents and employers. Identifies the unit statistical valuation month for every claim. It is extremely effective tool for reducing workers' compensation premiums. The Ascension software makes your claims management efficient and organized. Ascension software will take your professional claims management to the highest level of organization and efficiency.

What does Ascension Do?

Maintains and organizes all claims management data.

Ascension calculates employers' unit statistical valuation month for each policy period. It provides a Unit Stat Valuation Month Report notifying the user of upcoming valuations for each claim.

Our software calendars future claim events such as: contacting the insurance adjuster, doctors office, defense attorney, or employer. Using the To-Do tab, all optimized calendared events are planned for the user.

Ascension maintains all claims management reports, losses, both paid and reserve, including reserve reductions. The reports can be emailed to multiple parties. It assigns each claim with one or more email addresses with a 'set it' and 'forget it' approach.

Our software provides multiple report features for individual claims, all claims for the employer, or all claims for the agency. Ascension reports include:

- Unit Statistical Report

- Reserve Reduction Report

- Open/Close Summary Report
